SPORTCRETE LTD - WARRANTY

Use

Sportcrete has been developed to be used in the construction of bases for sports facilities. Sportcrete will bind granular surfaces together to form a hard, porous base for installation of final surfacing either in Bunkers or Sports fields.

Application

Sportcrete is applied using a dedicated pump system and must only be applied and installed using approved Sportcrete equipment.

Application is made to the surface at the prescribed rate for the specific type of facility and ground conditions on site. Typically, this is between 2 and 3 litres per square metre.

We recommend that a structural report is completed and passed to Sportcrete for assessment on all projects.

Warranty

The Sportcrete application is guaranteed for a period of 5 years.

The performance characteristics will remain within the stated parameters for the period of warranty, including force reduction and resilience.

The warranty is limited to repairing or replacing the base at the sole discretion of Sportcrete.

The warranty is limited and provided on a diminishing scale as follows.

Year 1	Full value
Year 2	80%
Year 3	60%
Year 4	40%
Year 5	20%

The base construction must have been constructed in accordance with Sportcrete guidelines and approvals.

All Sportcrete work is completed under design work undertaken through Support Management Limited. Full and detailed Professional Indemnity policy is in place to cover site design work undertaken and completed under this warranty.
