

International golf course specialist, Sternberg Golf Services of Sweden, has signed a major reconstruction project with The Wisley Golf Club in London, designed by renowned architect Robert Trent Jones II. The renovation, which will begin in April, will feature the installation of Sportcrete, a revolutionary engineered bunker-lining and drainage technology.

The renovation will include a full technical upgrade, reshaping of all features, and extensive drainage and hazard additions. Sternberg Golf Services will also install improved grass varieties that require less irrigation and enable the fairways and greens to play firmer and faster.

Established in 1991 and located just across the River Wey from the famous Wisley gardens of the Royal Horticultural Society, The Wisley Club was Robert Trent Jones Jr.'s first golf course in the U.K. It is widely regarded as one of the top courses in Europe and is home course to a host of Ryder Cup stars including Captain Colin Montgomery and Paul Casey to name but two.

Sternberg Golf Services combines traditional values and philosophies with the latest technologies to construct the very finest golf courses. A family oriented company, Sternberg Golf is headed by Martin Sternberg, former European mini-tour circuit PGA professional and the CGSAA's first fully certified European Golf Course Superintendent.

The firm boasts more than twenty-five golf course construction projects worldwide, including Sweden's Hills Golf Club, outside Gothenberg and Sand Golf Club (awarded Golf Digest Top 100 list in 2008) near Jönköping.

Sternberg Golf is a highly specialized golf construction company and holds certifications for the cutting edge technology available today in golf construction such as Sportcrete, for instance.
